EXPERIENCE

GRYT Health — Umbraco Frontend Developer

SEPTEMBER 2021 - PRESENT

I create and update conference sites built on Umbraco CMS. Utilizing Razor Markup, I make use of templates and partials to compose individual pages for each site.

With standard CSS and Bootstrap, I tailor each site's styles to match that of the wireframe design provided by our design team.

When required, I implement JavaScript solutions to execute tasks on the site based on the site's requirements. Currently these sites use both vanilla JavaScript as well as jQuery.

I develop and maintain departmental documentation such as how-to guides, code standards, and naming conventions.

A Thousand Words — Frontend Developer

APRIL 2021 – SEPTEMBER 2021

Live Demo: <https://a-thousand-words-ia23oi68u-redliz5808.vercel.app/>
Code: <https://github.com/redliz5808/AThousandWords>

A Thousand Words is a React and Redux application that consumes the Unsplash REST API to allow users to search for, view, and save high quality images.

React-Router is used to control the dynamic and static routes of the application, everything from navigating to the home page to navigating to a specific user page.

Due to increased complexity of the application state, I decided to implement Redux and Redux Thunk (needed because of the many async actions / API calls).

Due to complicated organization files and CSS style bleeding, Styled-Components is used to negate those issues as well as prepare for future scalability.

Infinite scrolling has been implemented to create a better user experience while retrieving data.

Version control is maintained using git.

Williamsfield Valley Veneer, Inc. — Systems Analyst

NOVEMBER 2017 – SEPTEMBER 2021

I implemented and maintained the WordPress website. I completed all server and workstation maintenance and setup. I provided help desk support to all team members. I was responsible for all Access database maintenance.

Bruce & Merrilees Electric Co. — Systems Analyst

MAY 2010 - OCTOBER 2017

I was responsible for physical and virtual server/workstation maintenance. I provided help desk support to all team members. I completed Active Directory maintenance, including user creation, deletion, and security modification. I maintained the intranet site as well as managed all social media accounts.

SKILLS

React

Redux

React-Router

Styled-Components

Redux Thunk

Redux Persist

JavaScript

HTML

CSS

Responsive Web Design

Git

GitHub

Umbraco CMS

Razor Markup

jQuery

Bootstrap

Sass

CERTIFICATES
